## *Plastic spacer compensation plates*

### *Description*

*Wood as a building material has become increasingly important in the recent years due to its many advantages. This includes its applications for interior fittings, windows, terraces, conservatories or in structural timber construction.*

*Especially in construction of wooden houses, good and professional craftsmanship is of great significance. Even small deviations can have a large impact.*

*For this reason, our spacer compensation plates are a reliable solution to compensate for tolerances in the base plate and to provide stable underlay for vertical stema. The plates are mainly produced from homopolymer thermoplastic recycling material polypropylene.*

*These spacer compensation plates do provide many advantages:*

- *High load capacity*
- *Permanent resistance against humidity and water*
- *Elimination of labor-intensive cutting costs for the production of wooden wedges*
- *Environment-friendly due to manufacturing from recycled material*
- *Prevents setting of the walls and therefore creation of cracks*

*The distance compensation plates are available with the following dimensions:*

<b>Art.-No.</b>	<b>Dimensions</b>
130502UP	130 x 50 x 2 mm
130502UP	130 x 50 x 3 mm
130502UP	130 x 50 x 5 mm
130502UP	130 x 50 x 8 mm
130502UP	130 x 50 x 10 mm
130502UP	130 x 50 x 12 mm
130502UP	130 x 50 x 20 mm

*Other sizes and dimensions on request.*

*The plates are packed in carton. The cartons do either contain plates with different thicknesses or 35x plates with the same thickness.*

*Due to optimized production in the injection molding process, we can offer you these spacer compensation plates at extremely favorable conditions. On average the required amount of spacer compensation plates for a one family house will cost about 30,- to 40,- euros. If you consider the time savings compared to self-made wooden spacer plates, our product almost compensates its price. And that with better properties than the wooden plates.*

*Just give it a try, we will be happy to supply you with a sample delivery for a construction project. The distance spacer plates are also ideally suited for other purposes, such as conservatory assembly, terrace construction, and much more.*
